You can use artificial light such as a halogen, incandescent, or LED lamp to test solar panels instead of sunlight. You can also use solar simulators, which produce light that mimics sunlight's intensity.

Step 1: Measure Open Circuit Voltage Step 2: Measure Short Circuit Current Step 3: Measure Operating Current Different solar panels will have information on the sticker on the back showing how to test. (1) Using a voltage meter, locate the open-circuit voltage (Voc) on the specifications label on the back of your solar panel. Write it down for later use. To measure the voltage of a DC circuit, you should prepare your multimeter by plugg...
