First Solar in late September opened a \$1.1 billion, 3.5-GW panel production hub in Alabama, pushing its domestic manufacturing footprint to nearly 11 GW -- more than all US module ...

With 65 new or expanded solar and storage facilities having come online in 2025, the United States has surpassed 60 GW of domestic solar module production capacity, a 37% increase ...

The current US solar manufacturing ecosystem represents a comprehensive network of production capabilities that extends far beyond simple panel assembly, with domestic module ...

This map provides information about all of the solar photovoltaic (PV) manufacturing facilities in the United States and how they contribute to the solar supply chain.

The United States is undergoing a transformational buildout of domestic solar and storage manufacturing. Like other industries, the U.S. can and is breaking free from an overreliance on ...

We've sourced manufacturing in the U.S. since 2012, building a robust and well-established production base that supports long-term industry growth and energy security.

The U.S. Solar Photovoltaic Manufacturing Map displays active manufacturing sites that contribute to the domestic solar PV supply chain. The sector, subsector, facility type, and manufacturing capacity are ...

This interactive map showcases the U.S. domestic solar supply chain. This includes all known U.S. facilities that manufacture components for the solar sector and includes details on their ...

Strategies for expanding domestic output of solar PV system components in a highly competitive global market include improving product performance, lowering costs of production ...

Domestic photovoltaic panel production base

For the first time ever, American solar panel manufacturers are capable of meeting the country's demand. The U.S. has exceeded 50 gigawatts (GW) in domestic solar manufacturing ...
