-----

The development of the transmission network is a decisive factor for the successful development of Switzerland's electricity supply. This network needs to be adapted to meet the new requirements.

Landis+Gyr unveils next-generation flexibility solutions in Switzerland to help utilities integrate decentralized energy resources, manage peak loads, stabilise the grid and support the ...

The long-term planning and further development of the Swiss transmission grid is crucial to ensuring a secure, powerful and efficient supply of electricity. This process results in a multi-year plan, which ...

Switzerland is integrated into the European electricity grid with 41 cross-border lines. Physically, it is therefore in constant exchange of electricity with neighbouring countries, which makes cross-border ...

In this paper, Swiss Re and the Reliability and Risk Engineering Laboratory at ETH Zurich discussed a series of questions on the grid stability topic.

In this paper, the findings of the grid planning studies for 50 HV-MV substations owned by two utilities in Switzerland are presented. The substations exhibit different spatial topologies in urban, mixed and ...

The database supports studies on flexibility provision of distributed energy resources, distribution grid resilience, and national energy policy, among other topics.

Feed-in management of PV systems is the most effective approach to reduce grid expansion costs. Load reduction and shifting (especially EV charging) is an effective demand-side in dense urban ...

In an ambitious bid to revolutionize energy storage and grid stabilization, a Swiss startup is integrating cutting-edge battery technology with renewable hydrogen systems to offer a ...

Swissgrid keeps the power grid stable by balancing grid fluctuations and continuously monitoring and
