Students will work collaboratively to formulate their own question for the Locker Problem and find a solution to that question. They will make a creative output to present their process and the solution.

The following is a solution to the "Lockers" question. First a relatively elegant and concise solution is given, followed by an explanation of some alternative ways of arriving at the conclusion.

That same pattern continues for all 100 students. Here's the question: "Which lockers are left open after all 100 students have walked the row of lockers?"

I need to figure out which lockers are left open in a row of 25, 100, and a row of 500 lockers. I have been trying to figure this out for 4 days and my parents can not figure it out either.

Your goal is to find out which lockers will be touched as all 20 students take their turn touching lockers. 1. Which locker numbers does the 3rd student touch? 2. Which locker numbers does the 5th student ...

Tiny Hints Bigger Hints A Little More of A Hint ... A Full Answer Further Questions Another 1997 question was given a complete answer: Doctor Anthony started with a correction, assuming this is meant to be the usual problem: There's the answer we'd stopped short of in the answers so far: Perfect-square-numbered lockers will be left open. Is that easy to see? Only when you see it the right way. He uses examples to make it as easy as... See more on themathdoctors
