Beware of high battery voltage and current. Please ensure that the battery module breakers and/or any switches are in the "open" or "off" position before installing or working with the communication hub.

This article takes you deep into the communication world of battery packs, revealing how batteries "communicate" with devices in different scenarios and how to choose the optimal...

The evolution from CAN bus to wireless IoT represents a revolutionary change in lithium-ion battery pack communication technologies. Wired communication methods like the CAN bus offer ...

Learn how to set up seamless BMS communication between EG4 batteries and inverters for optimal solar system performance.

Its primary use is to set the minimum SoC to determine how far the battery may be discharged and to ensure that there is enough energy left for self-discharge after a low SoC shutdown.

You should set the Locator and transmitter battery type to match the currently installed type. This is to ensure optimal performance and correct battery level indication.

Below will explain how each setting will change and impact the system. Discharge Amps - this value will determine the power the battery can discharge to load at the current is based on DC voltage, to work ...

For example, if three batteries are connected in parallel and there are no other devices connected, set the
