A new report indicates that the nation's energy storage market added 12.3 GW of installed battery capacity in 2024. The latest U.S. Energy Storage Monitor report was released this week by the ...

Firm Capacity, Capacity Credit, and Capacity Value are important concepts for understanding the potential contribution of utility-scale energy storage for meeting peak demand.

27.1 GWh of new battery capacity installed in 2025, marking the EU's 12th consecutive record year for battery storage deployment. 55% of all new capacity came from utility-scale systems, confirming ...

Find the latest statistics and facts on energy storage.

Solar, wind, and batteries are set to supply virtually all net new US generating capacity in 2026, according to the latest EIA data.

The U.S. has 431 operational battery energy storage projects, 8 using lead-acid, lithium-ion, nickel-based, sodium-based, and flow batteries. 10 These projects totaled 27 GW of rated power in 2024, 8 and have round ...

Battery storage capacity grew from about 500 MW in 2020 to 13,000 MW in December 2024 in the CAISO balancing area. Over half of this capacity is physically paired with solar or wind generation, either ...

The installed capacity of various storage technologies--ranging from lithium-ion batteries to pumped hydro systems--can significantly enhance grid reliability, facilitate integration of renewable energy ...

Global installed energy storage capacity by scenario, 2023 and 2030 - Chart and data by the International Energy Agency.

Installed capacity and capacity of energy storage batteries
