By breaking down barriers in a traditionally male-dominated field, the program proves that renewable energy can be a powerful tool for poverty reduction and gender equality. Women hold ...

"Women+ come from around the world, and not only learn real skills but also empower each other, build lifelong friendships and a sense of community that supports them as they enter the ...

MeiLing has invested significantly in research and development (R& D), focusing on improving both photovoltaic cell efficiency and system longevity. Technological innovations, such as ...

Based on the literature review we developed a theoretical framework that depicts various channels through which clean and reliable solar electricity might improve women's empowerment.

While we've seen a rise in the number of women employed in the solar industry, strategies to close the gender diversity gap are essential to making solar even more equitable.

Women are actively involved in decision-making processes and operational management, ensuring men and women benefit equally from improved agricultural productivity.

In this project, we look at how to increase the long-term social sustainability of solar energy and broaden the solar power deployment in Sweden by increasing the proportion of female house owners who ...

As demand for solar power continues to climb, an array of talented women scientists and technicians find themselves lighting the way.

All these aspects are crucial in how women perceive themselves and their career growth, often suffering from the imposter syndrome, also known as fraud syndrome.

Meiling solar power generation is open to both men and women

The share of women employed in organisations engaged in off-grid, on-grid or both types of solar energy also showed no significant differences, either overall or in the different roles; therefore we assume ...
