A stringent recycling effort to recover metal resources from end-of-life PVs is required for resource recovery, circular economy, and subsequent reduction of environmental impact.

This research focused on the recycling of end-of-life PV solar panels and introduced a new separation method specifically for the PV materials obtained after thermal delamination treatment.

Abstract The disposal of end-of-life (EOL) photovoltaic solar panels has become a relevant environmental issue as they are considered to be a hazardous electronic waste. On the other hand, ...

Macquarie University researchers have developed a process to extract silver from retired solar panels. They are working with Lithium Universe to reuse the metal in electronics and solar...

The rapid proliferation of photovoltaic (PV) modules globally has led to a significant increase in solar waste production, projected to reach 60-78 million tonnes by 2050.

This detailed guide highlights groundbreaking technologies that revolutionize solar panel recycling.

In recent years, recovering precious and base metals such as silver and copper from end-of-life products has become a fundamental factor in the sustainable development of many countries. ...

Nevertheless, few researchers have studied the recovery of the valuable metals present in EOL solar panels, while most researchers recover aluminum and then stop at this stage.
