-----

Here we fit growth models to wind and solar trajectories to identify countries in which growth has already stabilized after the initial acceleration.

Wind power is the nation's largest source of renewable energy, with more than 150 gigawatts of wind energy installed across 42 U.S. States and Puerto Rico. These projects generate ...

Renewable sources--wind, solar, hydro, biomass, and geothermal--accounted for 22% of generation, or 874 billion kWh, last year. Annual renewable power generation surpassed nuclear ...

The United States' shift towards clean electricity continued in 2024, as wind and solar together rose to 17% of total electricity generation, surpassing coal, which dropped to an all-time low ...

The National Renewable Energy Laboratory (NREL) is a U.S. Department of Energy national laboratory located in Golden, Colorado. As part of the PERFORM project, NREL has produced a set of time ...

To study America's growing renewable electricity capacity and generation, Climate Central analyzed historical data on solar and wind energy over a 10-year period (2014 to 2023).

In 2019, wind power surpassed hydroelectric power as the largest renewable energy source in the U.S. In March and April of 2024, electricity generation from wind exceeded generation from coal, once the ...

This report uses data from the EIA to analyze solar and wind capacity and generation over the past decade (2014 to 2023) in all 50 states and the District of Columbia.

Figure 1 shows projections from the National Renewable Energy Laboratory's Standard Scenarios,<sup>4</sup> including projected growth in capacity (top) and generation (bottom) in the coming decade, with wind ...

With the new projects online, renewables (including wind, solar, geothermal and hydropower) and battery

# National wind and solar power generation

storage now make up 30% of the country"s large-scale power generating ...
