-----

Brazil's second Nationally Determined Contribution (NDC) outlines the country's commitment to reducing net greenhouse gas emissions by 59% to 67% by 2035, relative to 2005 levels.

Brazil announced a significantly more ambitious Nationally Determined Contribution (NDC) at COP29, committing to a deeper cut in greenhouse gas emissions by 2035.

Brazil is one of the world's top ten GHG emitters, but its existing endowments can support other regions to decarbonize more cheaply and efficiently.

Brazil achieved a historic reduction of 16.7% in its gross greenhouse gas emissions in 2024, decreasing from 2,576 million tons of CO<sub>2</sub> equivalent in 2023 to 2,145 million in 2024.

Cutting emissions by 67% by 2035 could put Brazil on a pathway to reach net-zero by 2050. Getting there requires bold domestic policies to halt deforestation and promote restoration, ...

COP30 in Brazil represents a historic first, with the country being the first COP host to have a national CCUS law, an operating direct air capture plant, a project nearing CO<sub>2</sub> injection for ...

As part of a plan aligned with the Paris Agreement's 1.5°C mission, Brazil has set an ambitious climate goal to reduce greenhouse gas emissions by 59-67% by 2035, based on 2005 levels.

To peak and then rapidly decrease emissions, as required in order to limit warming to 1.5°C, Brazil will need to sustain and strengthen policy implementation and accelerate mitigation action in all ...

Brazil's new climate pledge, launched at the COP29 climate summit in Baku, aims to cut greenhouse gas emissions by as much as two-thirds by 2035 compared to 2005 levels.

Brazil was the second nation to submit the climate plan for the third generation of the Nationally Determined
