-----

To address this, a solar-powered automatic yoghurt fermentation system was developed, featuring dual-mode operation (incubation and cooling), automated pH-timer control, solar-assisted heating with ...

Solein is a protein produced through a fermentation process that uses air and electricity, bypassing traditional agricultural methods. It is seen as a potential solution to provide a sustainable ...

Today's biotech revolution has been able to put the idea into action: Solar Foods is one of a growing number of firms offering fermentation-based platforms to food production.

Therefore, the objective of this study was to develop and experimentally validate a fully automated solar-assisted yoghurt fermentation system that integrates incubation and cooling, ...

Some solar bioreactor (SBR) designs may work well at a small scale but they are impossible or inefficient to operate when scaled up. Numerous designs and configurations of SBRs ...

The solar powered bio-fermenter automatizes the fermentation process for preparation of biological inputs. The system comprises two tanks (for fermentation and filtration), a battery-powered ...

This research aims to build a smart solar chicken manure fermentation system to control the conditions of chicken manure fermentation effectively, improve quality, and solve the problems of environmental ...

PCM's capacity to store and release thermal energy ensures fermentation stability, even without solar radiation. This innovative approach offers a compelling environmentally friendly solution ...
