For existing buildings, solar control glass can be used to reduce solar gain and help to avoid overheating. Solar control glass is specially designed to reduce solar gain and if combined with a low ...

There are many ways to control and manage solar gain and overheating through glazing. Discover the technical solutions on offer at IQ Glass.

Discover the ultimate guide to solar control glazing for warm climates. Learn about the benefits, types, selection criteria, and installation/maintenance.

Solar control glass can be effective at reducing glare and excessive heat -- useful in heavily glazed homes. Our guide reveals what you need to know and costs. Solar control glass can ...

Recent modelling by Jason Quinn of Sustainable Engineering found that improper glass choice and orientation could lead to over 33% increased risk of houses overheating.

By selecting the right choice of glass for the application, combined with suitable ventilation and sensible occupant behaviour, overheating can be reduced or even eliminated.

As solar control glass reduces overheating, it is best practice to determine which windows face south or west. These windows will receive the most sun throughout the day and heat the inside ...

To reduce the possibility of overheating and glare problems especially in hot climates, vast glazing technologies, such as reflective coating, solar control low-e coating and tinted glass with ...

One of the simplest and most effective ways to control overheating is with high-performance solar control glass. Modern solar control coatings are engineered to strike a balance between solar ...

Solar control glass is designed to reduce overheating in homes and buildings due to solar gain. By reflecting

Solar glass investment is overheated

infrared radiation and allowing natural light through, it maintains indoor comfort ...
