How much does a solar inverter cost?

Today, most new photovoltaic (PV) installations utilize a string inverter or a microinverter. However, you can also get an inverter prepackaged together with a charge controller, battery and other components by buying a solar generator. Inverter costs usually range from \$1,000 to \$3,000, depending on your solar energy system's total power capacity.

What is a solar inverter?

A solar inverter is the electronic heart of your solar power system--a sophisticated device that converts the direct current (DC) electricity generated by your solar panels into the alternating current (AC) electricity that powers your home and feeds into the electrical grid. Think of it like a translator at the United Nations.

What factors affect solar inverter costs?

Factors that affect solar inverter costs include: System size- Your inverter's input-wattage rating should be close to your solar panel system's output rating. U.S. residential solar panel systems typically fall in the 5 kilowatt range. Efficiency - The industry standard for peak efficiency is 97%.

How much does a solar generator cost?

For a DIY solar-panel system installation, consider a solar generator that typically includes an inverter, battery, and charge controller all in one user-friendly package. Portable solar generators cost \$500 to \$3,300. Which inverter is best for solar panels?
