Despite the changing market and policy conditions that the solar industry has faced this year, solar will remain the dominant power source added to the grid in the next five years.

Provisions in the GOP policy bill would end a host of tax credits for renewable energy, including one that allows homeowners to recoup 30 percent of the cost of a rooftop solar system. ...

Right now, U.S. manufacturers do not produce enough solar panels to meet the nation's demand, but industry investments and federal tax incentives have been making progress, though ...

This article explores why the solar industry is struggling, what it means for the clean energy transition, and how governments and homeowners can adapt. From climate impacts to ...

That includes electricity from solar, wind and hydroelectric power plants, with solar driving the increase, the Sustainable Energy in America 2025 Factbook, released Friday, reports.

The demand for solar energy in the United States is soaring, yet domestic manufacturers are struggling to keep pace with this growth. As more solar panels are installed each year, the gap ...

In 2018, Trump approved tariffs on imported solar cells and panels after the U.S. International Trade Commission found that a flood of imports hurt American companies.

U.S. consumer demand for renewable energy continues to grow, with more solar panel capacity installed in 2024 than in 2023, which saw more than in 2022. But U.S. trade policy is in flux, ...

A dependence on components from Asia, import tariff uncertainty and demand concerns have curbed plans for American solar factories.
