After all, electricity demand in the US is going through the roof and solar is the most abundant, accessible, and economical domestic energy resource available today. The US Energy ...

Getting schools on board with solar now can protect their budgets and prepare students for the energy systems that will power tomorrow. If they don't, the options ahead will only be more ...

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

Today solar power is long past the toy phase. Panels now occupy an area around half that of Wales, and this year they will provide the world with about 6% of its electricity--which is almost...

Solar electricity is growing rapidly, but can it really dominate the global energy system? Here is what it will take for us to power the planet on sunshine

Solar energy is the fastest growing and most affordable source of new electricity in America. As the cost of solar energy systems dropped significantly, more Americans and businesses ...

The rapid growth of solar power in recent years has been one of the most remarkable stories of global energy. In 2022, the world added more new solar capacity than all other energy ...

Renewable energy sources, including solar, wind and hydropower, are forecast to meet over 90% of the global electricity demand growth through 2030.

Far from a sector on life support, the solar industry is growing, but it will need to adapt to the new political and economic environment if it is to continue making progress.

Despite the Trump administration's wide-ranging attacks on renewables like wind and solar power, the

Solar power generation is a big deal

clean-energy industry is on pace for record growth this year, according to ...
