As energy consumption continues to rise globally, understanding the fundamental differences between solar power and traditional electricity becomes crucial. These energy sources ...

Worldwide solar and wind power generation increased faster than the growth of electricity demand in the first six months of the year, according to a new analysis.

Solar energy can be harnessed two primary ways: photovoltaics (PVs) are semiconductors that generate electricity directly from sunlight, while solar thermal technologies use sunlight to heat water for ...

Now, they're consuming more than 1,000 kilowatt hours per month. This paradox is called the solar rebound effect: the ratio of the increase in energy consumption to the amount that is ...

Ember (2026); Energy Institute - Statistical Review of World Energy (2025) - with major processing by Our World in Data. This dataset contains yearly electricity generation, capacity, ...

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal,...

This energy can be used to generate electricity or be stored in batteries or thermal storage. Below, you can find resources and information on the basics of solar radiation, photovoltaic and concentrating ...

Renewable energy production and consumption both reached record highs in 2023: production was about 9% (8.43 quads) of total primary energy production and consumption was ...

This fact sheet illustrates the roles of distributed and centralized renewable energy technologies, particularly solar power, and how they will contribute to the future electricity system.

Solar power generation is greater than electricity consumption
