The massive growth in wind and solar begs the question: why is China still building coal power plants and, by most analyses, way more than it actually needs? The answer is complicated.

A massive open-sea solar plant is under construction in China, designed to power millions of homes and test how floating solar works at scale.

While Australia debates the merits of going nuclear and frustration grows over the slower-than-needed rollout of solar and wind power, China is going all in on renewables.

Chinese clean energy supplier Jinko Power has filed a proposal with the Australian government to build a 600 megawatt (MW) solar farm with a 400MW/800MWh battery energy ...

Chinese solar developer Jinko Power has filed an application with the Australian government seeking approval for a 600 MW solar farm and 800 MWh battery energy storage project ...

A large part of the solar power capacity installed in China is in the form of large PV power plants in the west of the country, an area much less populated than the eastern part but with better solar ...

China's solar generating capacity is expected to surpass coal for the first time this year, according to the country's top electricity industry group, marking a milestone in the country's...

Located in remote Qinghai province, with a total installed capacity of 2.2 gigawatts, it is China's largest and world's 2nd largest solar plant. The development plan of the project was divided into 5 phases ...

XINING, June 9 -- Amid China's green energy revolution, the world's largest solar photovoltaic power plant on the Qinghai-Xizang Plateau is forging a unique development path, ...

Far off the coast of Shandong, a new kind of power plant is quietly feeding China's coastal cities. A vast field

Solar power station in China in Brisbane

of solar panels, fixed to steel trusses in shallow water, has become the world ...
