-----

The Beijing Subway Yanfang Line (BSYL) is the 19th urban railway transit line built and operated in Beijing, China. It is China's first self-developed fully automatic subway line.

The integration of smart city concepts into subway systems promotes seamless connectivity between public transport, urban infrastructure, and digital services, enhancing the overall commuter experience.

OverviewAutomation and signalingConstruction methodsPlatform screen doorsAir conditioning in stationsFASTRACK2015-2019 Capital Program overhaulTrain arrival countdown clocksThe MTA has plans to upgrade much of New York City Subway system from a fixed block signaling system to one with communications-based train control (CBTC) technology, which will control the speed and starting and stopping of subway trains. The CBTC system is mostly automated and uses a moving block system - which reduces headways between trains, increases train frequencies and capacities, and r...

Explore our in-depth subway case study, showcasing how we spearheaded a digital transformation initiative with innovative solutions, streamlined operations, and elevated commuter experiences across 700+ locations.

These systems enable ticket vending, fare validation, and access control in a single, unified platform. Passengers can purchase tickets, validate their fare, and gain access to the subway with ease, eliminating ...

Welcome to the Subway Equipment Support website. This site aims to support your installation, operations and service needs by providing documentation such as spec sheets, manuals, illustrated parts list and videos for ...

The MTA has plans to upgrade much of New York City Subway system from a fixed block signaling system to one with communications-based train control (CBTC) technology, which will control the speed and starting ...

Rittal is your one-stop rail provider of IT infrastructure and control cabinets for the rail industry, including subway and commuter rail systems.

Fixing damage caused by a devastating storm, GE refurbished and updated the tunnel systems, providing state-of-the art control systems for the ventilation and parallel switchgear controls using RX3i PLCs, VersaMax ...

Drawing inspiration from the structured nature of Non-Deterministic Finite Automaton (NFA), we present a novel approach to designing and implementing a Subway A

This zone typically includes customer amenities, including retail, washrooms and advertising. Vertical circulation systems are important elements in this step and consistent design is essential in ...
