BASE incorporates competences of the highest quality along the whole battery value chain, from experimental research to modeling expertise, to advance research with a strong connection to real ...

SEEL has test facilities in Gothenburg, Nykvarn and Borås and provides a platform to accelerate the development of electrified transport and contribute to a sustainable and competitive battery value ...

To align with society's increasing number of batteries, RISE opened a top-notch lab for safety-critical testing of batteries in September 2023 in Borås, Sweden. The lab, which is a part of...

DEKRA measures the health of the battery and reproduces the result on a scale of 0-100, in just 15 minutes. It is becoming increasingly important to be able to quickly evaluate the battery condition of ...

Traton subsidiary Scania has commissioned a new battery laboratory at its research and development facilities in Södertälje, Sweden. The facility consists of three 250 m² test halls for ...

In battery testing, we use a variety of testing methods to be able to meet your needs. Do you want to test the performance and aging progress of batteries through cycling tests? Or do you want to analyze ...

Testing services for battery cells, modules and entire systems, from small hybrids to full electric cars. The battery is the key component of the electric vehicle.

Leading Swedish labs are integrating digital twin simulations and real-time IoT-based monitoring in battery testing, making Sweden a leader in smart diagnostic systems.

A new generation of battery testers, outperforming others in reliability, repeatability and rapidity, are expected to reach the market during 2025. These testers are based on research and patents from ...

Our laboratory can test everything from single-cell fuel cells of a few watts up to full stacks of around 10kW,

Sweden battery testing

providing a critical range for translating research and development into viable products.
