(Yicai) Dec. 16 -- China will add more than 200 million kilowatts of new wind and photovoltaic power generation capacity next year as it accelerates the green and low-carbon transformation of its energy ...

Rapid solar capacity expansion overwhelms the grid, PV manufacturers compete for market shares, and then large target markets slap import tariffs on Chinese PV products, taking off ...

China installed a record 315 GW (AC) of new solar capacity in 2025, lifting cumulative installed PV capacity to 1.2 TW and pushing non-fossil power sources past thermal generation for the ...

China's surge in renewables and whole-economy electrification is rapidly reshaping energy choices for the rest of the world, creating the conditions for a decline in global fossil fuel use. Clean generation ...

China has set a new benchmark in its transition to renewable energy, with wind and solar power sources generating 26% of the nation's electricity in April 2025. The achievement marks ...

China's solar energy production is reaching simply staggering levels, dragging energy costs down around the globe.

Solar surged 64% in H1 2025 with 380 GW added worldwide, led by China's record pace, keeping 2025 on track for new highs.

This year China will see its solar capacity outstrip its coal capacity for the first time, according to an industry group. In its latest projections, the China Electricity Council says that, by the ...

According to Global Energy Monitor's Global Solar Power Tracker, China has over 709 GW¹ of prospective solar capacity, representing over one-third of planned solar capacity worldwide in 2025.

The future share of solar power generation in China

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn
