Ofgem has confirmed that 77 Long Duration Energy Storage (LDES) are entering the final assessment stage of their cap and floor scheme. Long Duration Energy Storage (LDES) refers to ...

Longer duration storage can support a future energy system with high proportions of renewable energy by providing flexible energy supply and demand, and increasing the resilience of energy networks.

From mountainous pumped hydro to cutting-edge cryogenic and compressed air technologies, the UK is deploying a broad portfolio of energy storage solutions to ensure energy security, decarbonisation, ...

On 10 October 2024 the UK Government gave the green light to a cap and floor scheme to help bring long duration energy storage (LDES) projects to market. LDES projects include pumped storage ...

A more resilient energy system would require reductions in energy demand; a more flexible electricity system; and domestic low-carbon energy generation. It would also benefit from ...

The United Kingdom's energy infrastructure is navigating a complex winter supply outlook in 2024/2025, marked by tighter gas margins and evolving geopolitical risks.

A new government strategy will help safeguard critical energy infrastructure and protect consumers and businesses from costly disruption.

Use industrial clusters to optimise industrial electricity consumption, storage, and infrastructure development. Industrial clusters are a core part of the UK's industrial strategy.

Grid-edge battery storage extends beyond reliability. These systems reduce energy costs by up to 50% whilst generating additional revenue through grid flexibility markets. Research suggests every pound ...

United kingdom energy storage for resilience

The purpose of this report is to identify the principal resilience risks facing the UK's energy system as it undergoes that transition and changes in both demand and supply.
