---

President Trump declared an energy emergency, prioritizing thermal and hydropower generation over wind, solar and storage. We expect this order to expedite permitting and streamline ...

We must transition to clean energy solutions that drastically cut carbon emissions and provide a sustainable path forward. The synergy between solar PV energy and energy storage ...

Over the past five years the pairing of solar photovoltaics (PV) with battery-energy-storage systems (BESS) has moved from demonstration projects to being a core pillar of national energy-transition ...

Storage, Markets, and Changing Incentives December 12, 2025 Explore the top solar energy trends for 2026, including storage growth, incentive changes, and why solar is becoming a ...

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record growth in 2024 ...

The landscape of energy in the United States is undergoing a significant transformation, with solar power and energy storage poised for remarkable growth by 2025.

Solar PV will account for around 80% of the global increase in renewable power capacity over the next five years - driven by low costs and faster permitting timeframes - followed by wind, ...

In 2024, 91% of new renewable projects offered cheaper electricity than the lowest-cost, new-build fossil fuel alternative. The cost of battery energy storage systems for grid applications also ...

Markets are ready to build tomorrow's energy system today, and cost forecasts must reflect that momentum. The energy transition is not waiting for overly slow projections to catch up.

## When will photovoltaic development and energy storage catch up

Residential PV is rising, capturing a larger share of rooftop installations with 108 GWDC, while commercial and industrial PV will see a slight dip, totaling 78 GWDC this year. The expanding solar ...
